OBJECTIVE

Software Engineering student at the University of Karachi with professional frontend development experience building scalable, data-driven web applications using Angular, React, Next.js, TypeScript, and Tailwind CSS. Experienced in developing enterprise dashboards, integrating RESTful APIs, implementing interactive data visualizations, and translating Figma designs into responsive, accessible, and production-ready user interfaces. Experienced in building production-ready applications with an emphasis on code quality, performance, and usability.

SKILLS

Languages	JavaScript, TypeScript, Python, HTML, CSS
Frontend	React, Next.js, Angular, Tailwind CSS
Backend	Node.js, Nest.js, FastAPI
Databases	MongoDB, PostgreSQL
Tools & Practices	Git, GitHub, REST APIs, Figma-to-Code, Cross-team Collaboration

EXPERIENCE

Frontend Developer

June 2025 – December 2025

ThreatCure

Karachi, Pakistan

- Developed key frontend modules for ShieldOps, a cybersecurity threat monitoring platform, using Angular, TypeScript, and Tailwind CSS, delivering scalable, responsive, and production-ready user interfaces.
- Designed and implemented interactive security dashboards using D3.js, integrating RESTful APIs to visualize real-time event logs, offense statistics, histogram data, and severity-based analytics through dynamic bar charts, pie charts, and Top Offenses dashboards.
- Engineered a fully customizable event table with dynamic column reordering, resizing, visibility toggling, addition, removal, and replacement, enabling flexible analysis of large-scale cybersecurity event data.
- Developed reusable Angular components and shared utilities to improve maintainability and reduce code duplication while optimizing application performance through component refactoring, efficient rendering, and responsive UI enhancements for data-intensive dashboards.
- Enhanced user experience by implementing an animated background using tsParticles and actively contributed to debugging, code reviews, and frontend improvements following modern Angular best practices, accessibility standards, and maintainable code architecture.

PROJECTS

Attendify – Attendance Management System

Designed and developed a full-stack attendance management system using Next.js, TypeScript, Prisma, and PostgreSQL. Implemented role-based authentication, geofence-enabled attendance, shift scheduling, leave management, employee administration, and real-time dashboards to streamline workforce attendance and operations. ([Live App](#))

Elevate by Nike (Nike Clone)

Built a responsive e-commerce application using Next.js, Tailwind CSS, and Sanity CMS, converting Figma designs into a production-ready interface. Developed dynamic product rendering, shopping cart functionality, CMS-driven content management, and responsive user experiences following modern frontend best practices. ([Live App](#))

Physical AI and Humanoid Robotics

Developed a Retrieval-Augmented Generation (RAG) chatbot using Python that delivers context-aware responses by combining semantic document retrieval with Large Language Models (LLMs), enabling accurate question answering on robotics and artificial intelligence topics. ([Live App](#))

Secure Data Encryption System

Engineered a secure web application using Python, implementing Fernet symmetric encryption and hashed passkey authentication to protect sensitive user data while ensuring secure encryption, decryption, and authentication workflows. [\(Live App\)](#)

Todo Full-Stack Web Application

Developed a full-stack task management application featuring secure authentication, AI-assisted task recommendations, and complete CRUD operations. Designed a responsive user interface and implemented efficient data management workflows to improve productivity and user experience. [\(Live App\)](#)

EDUCATION

BS Software Engineering	2026 – Present
University of Karachi	
Intermediate (Pre-Engineering)	2024
St. Lawrence’s Govt. Girls Degree College, Karachi	
Matriculation (Science)	2022
Sir Syed Children’s Academy, Karachi
